How to Downgrade from iTunes 12 back to iTunes 11

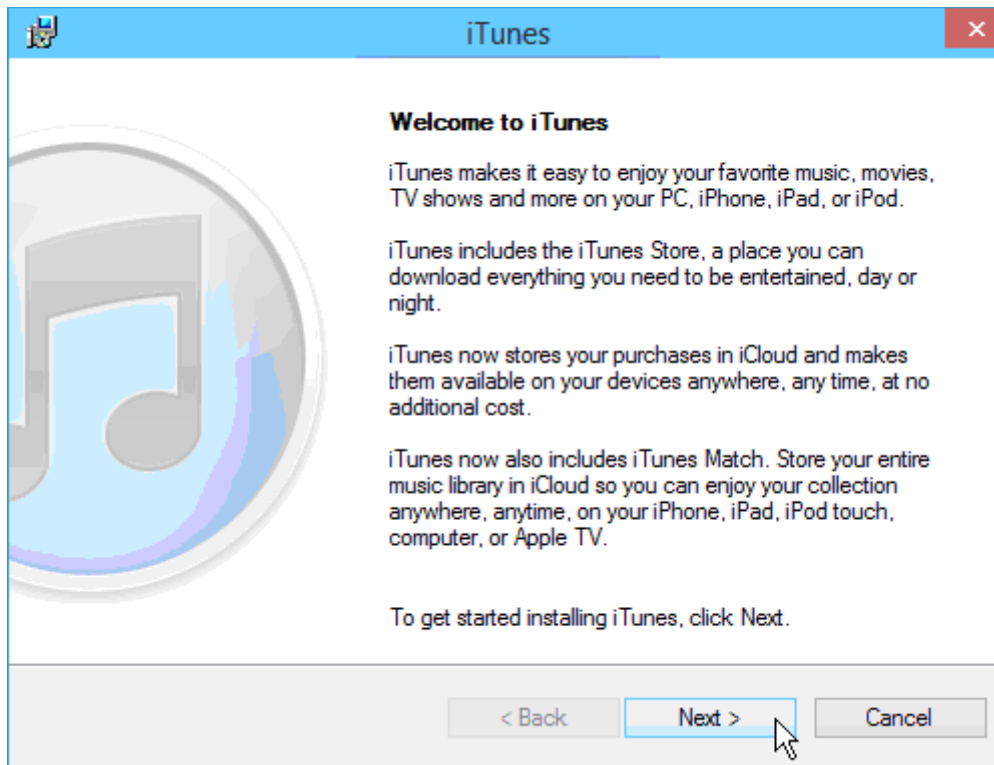

1. Uninstall iTunes 12

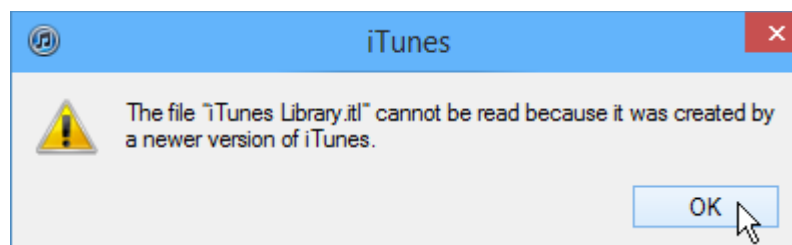

2. [Download iTunes 11](#) from CDMA Tool web site (*iTunes64.11.4.Setup.zip*)

3. Install iTunes 11.4

A lot of you will get the error message shown below saying that **Library.itl** can't be read because it was created with a newer version — Click OK on that and make sure iTunes is closed.

Now head to the local music folder on your computer. For example on my system it's located in **C:\Users\DFS\Music\iTunes**.

From there delete the **Library.itl** file and then launch iTunes again and it should work as it will create its own version of the Library.itl file.
